

PRINCE RAI

Chennai, India · +91-6307000614 · princer8858@gmail.com · github.com/prince-rai88 · linkedin.com/in/prince-rai-88pr127

Second-year CSE engineer who builds and ships production systems — full-stack web apps, LLM-powered backends, and agentic AI tools. Built a live MCP security server adopted at a national hackathon, deployed multiple production applications, and actively freelancing — all in Year 1. Strong foundation in backend systems, REST API design, and applied AI with a focus on real-world execution.

EDUCATION

B.Tech, Computer Science Engineering · SRM Institute of Science and Technology, Chennai 2025 – Present

CGPA: 9.9 / 10.0 (Year 1 — Semesters 1 & 2)

EXPERIENCE

Web Development Intern · inAmigos Foundation 2026

- Developed and improved web pages for the inAmigos platform; identified and reported functional issues across the website to support ongoing development.

Freelance Full-Stack & AI Developer · Fiverr Jan 2026 – Present

- Running active gigs in full-stack web development (React + Django) and agentic AI automation — building LLM-integrated applications and AI workflow systems for clients.

Technical Member · Google Developer Groups on Campus, SRM Mar 2026 – Present

- Contribute to developer community initiatives, technical workshops, and open-source projects at the SRM campus chapter.

PROJECTS

Aegis — MCP Security & Governance Server

NitroStack · TypeScript · Model Context Protocol · Groq · [GitHub](#) · [Live](#)

- Built an MCP server that audits the combined effective permissions of an AI agent across all connected tools — deterministically detecting toxic capability combinations and data-exfiltration vectors before deployment, at zero LLM token cost.
- Exposes 4 MCP tools consumable directly by Claude, ChatGPT, or NitroStack Studio; includes a capability graph widget, attack-path alert widget, and a Groq-powered policy explanation prompt.
- Live deployed on NitroStack cloud — won 1st Place at NitroStack x SRM Agentic AI Hackathon.

FinAI — AI-Powered Financial Advisor

Django · React · PostgreSQL · OpenAI API · [Live](#) · [GitHub](#)

- Full-stack expense tracker that uses OpenAI to analyze categorized transaction data and generate personalized, context-aware savings recommendations.
- Secure Django REST backend with JWT authentication; deployed end-to-end across Vercel (frontend), Render (backend), and Supabase (PostgreSQL).

DeadDrop — Agentic Personal Action-Routing System

n8n · Groq LLaMA 3.3-70B · Telegram API · Airtable · [GitHub](#)

- Built a multi-branch agentic system that semantically classifies unstructured Telegram inputs — tasks, reminders, ideas, urgent alerts — using Groq LLaMA 3.3-70B with confidence scoring, routing them across 6 decision branches with zero manual intervention.
- Confidence-gated architecture triggers a clarification loop for low-confidence inputs; all data persisted in Airtable with a nightly priority-grouped digest delivered via Telegram.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java (DSA)

Frontend: React.js, Next.js, Tailwind CSS, Bootstrap, HTML/CSS

Backend: Django, Django REST Framework, NitroStack

Databases: PostgreSQL, MongoDB, SQLite

AI / GenAI: OpenAI API, Groq, LangChain, OpenRouter, HuggingFace, OpenCV

Tools & Infra: Git, n8n, OpenClaw, MCP, Postman, Vercel, Render, ngrok

Concepts: REST APIs, JWT Auth, RBAC, Agentic Workflows, MCP, GenAI, DSA

ACHIEVEMENTS

- ▶ 🏆 1st Place — NitroStack x SRM Agentic AI Hackathon | Built and deployed a live MCP security server for AI agent governance.
- ▶ 🥉 3rd Place — The Last Commit, Agentic AI Hackathon by Cherry+ Network, SRM | Built a working autonomous AI routing system in 12 hours as a first-year participant.
- ▶ 🎓 9.9 / 10.0 CGPA across Year 1 (Semesters 1 & 2) — top academic performance alongside active project development, internship, and hackathon participation.
- ▶ 100+ problems solved on LeetCode (Java) — consistent algorithmic practice covering Arrays, Hashing, Sliding Window, Two Pointers, and Binary Search.
- ▶ Actively building in Generative AI — studying LLM application development through structured coursework (CampusX) and hands-on implementation with LangChain.
